

Assignment - Hotel Booking

Design a database schema for a hotel booking agency using the E-R model and design tables accordingly using the relationship model. The necessary information is given below :

Entities : Hotel, Customer

Customer can be first time user or loyal customer.

Customer can book from only one hotel at a time. A hotel can have many customers.

In Hotel Table : hotel_id is primary key

In Customer Table : customer_id is primary key.

Entities :

Hotel : Hotel is strong entity here, because it can exist independently.

Customer : Customer is weak entity here because it cannot exist independently of hotel.
